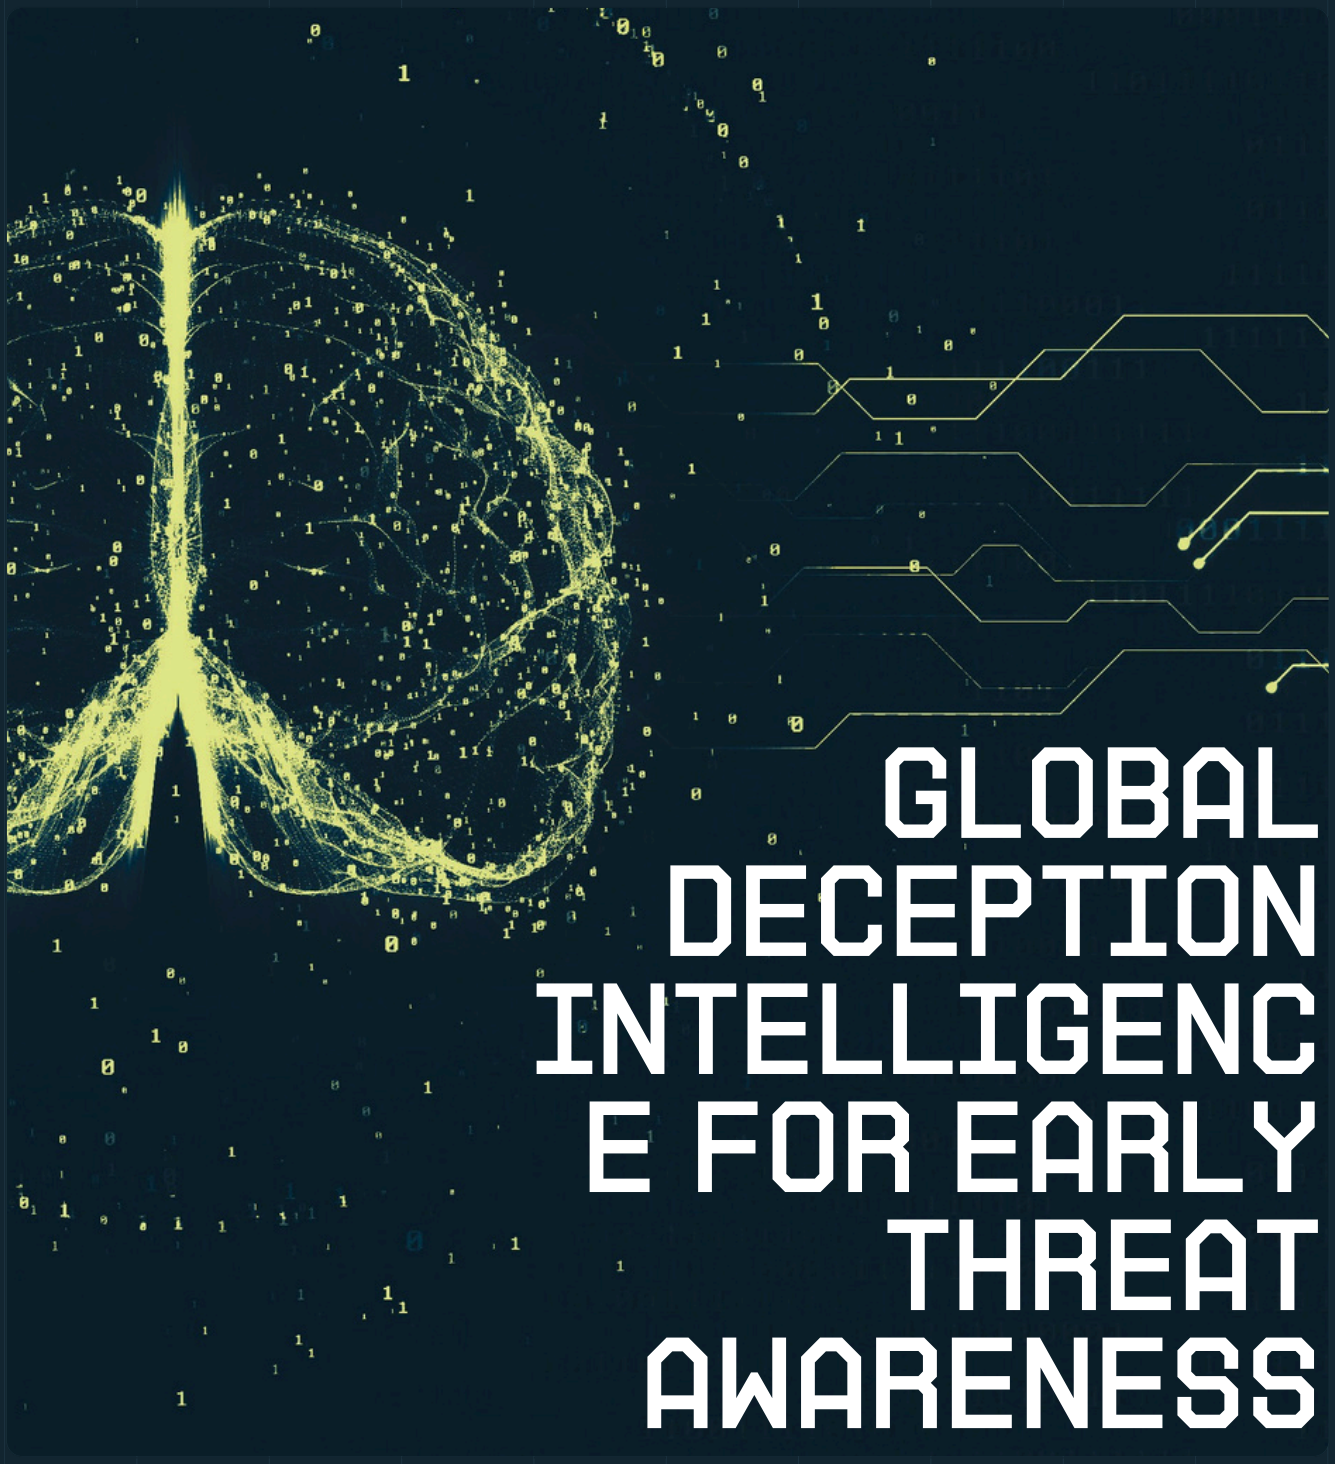
THREATIQ GLOBAL

Discovery Layer



GLOBAL DECEPTION INTELLIGENCE FOR EARLY THREAT AWARENESS

CyberTrap ThreatIQ Global extends deception beyond the enterprise - into the open internet. By deploying and operating a global swarm of decoys and digital twins across high-risk regions, public clouds, and internet exchange points (IXPs), it collects attacker behavior and threat intelligence at scale - before attacks reach your perimeter.

CYBERTRAP

THREATIQ GLOBAL

Discovery Layer

ThreatIQ Global is a next-generation threat intelligence capability built around a distributed deception infrastructure. Thousands of lightweight containerized decoys and full digital twin clusters are operated across major cloud providers and geo-strategic hotspots - deliberately exposed to attract and study global threat actors.

This Decoy Swarm-as-a-Service collects rich, first-hand telemetry on live attacker techniques, including malware payloads, C2 infrastructure, credential theft attempts, and TTP sequences - directly from hostile internet traffic.

Captured data is processed through CyberTrap's cloud analytics and curation pipeline, which maps behavioral patterns to the MITRE ATT&CK framework, scores statistical noise levels, and detects emerging CVE exploitation trends in near real time.

THREATIQ

Finally, curated intelligence is delivered directly to customers via REST and STIX-TAXII APIs, Splunk HEC, Elastic Beats, or email digests. This includes a high-confidence IoC feed, "Weaponized CVE of the Week" alerts, and attacker behavior fingerprints that enrich ThreatIQ Local detections within your own network.

USER BENEFITS:

- Global Threat Visibility Before Perimeter Contact
- Cloud-Delivered Decoy Swarm Intelligence
- Real-Time Global Adversary Behavior
- Enrichment for ThreatIQ Local
- Dark web visibility for early detection of leaked information
- Multi-Channel Delivery
